Abstracts

Automated border control is an automated system that initiates processing as soon as the traveler enters and assures that the passenger is the rightful holder of the document. It includes modern technologies of e-gate such as border control software and facial recognition. Automated border control provides an efficient solution to airport systems and also provides passengers a convenient experience. These solutions improve border crossing time, allowing passengers to pass through the gate automatically, reducing the risk of human error and related time loss. Automated border control detects frauds with greater risk with the help of electronic microprocessors.
