## Abstracts

Automated mine scanning machines are equipped with a vision system and advanced sensor fusion technology. This advancement in technology makes the machines efficient to be incorporated in the underground mining operation. With the integration of Internet-of-Things, cloud computing, and big data, these machines are implemented beneath the land surface to capture the data precisely. Moreover, the accessibility of data transmission and communication between operators and mining labors is not possible through manual operations. However, with the implementation of advanced automation and machines, data capture and transmission have improved. The improvements have also enabled the underground mining data to be captured with fewer complications and high precision through the implementation of automated mine scanning machines.
