Abstracts

Optical metrology is the field of science and technology that is concerned with optical measurements such as radiometry and photometry. The technology includes measurement of unseen dimensions and objects and is majorly used for applications where it is difficult to establish physical contact between the sensors and surface of the object to be measured. The industrial manufacturing has evolved over the years and become highly competitive on account of profit crunching, need for achieving economies of scale, and mounting pressure to deliver quality output in shorter lead times. This has driven the need for automation in manufacturing units, supporting demand for automated metrology equipment for inspection and reverse engineering applications. Thus, optical metrology being capable of boosting efficiency, productivity and quality levels through 100% inspection rates has become an integral element in industrial automation.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Automated Optical Metrology market covering all its essential aspects.
