Abstracts

Optical metrology is the field of science and technology that is concerned with optical measurements such as radiometry and photometry. The technology includes measurement of unseen dimensions and objects and is majorly used for applications where it is difficult to establish physical contact between the sensors and surface of the object to be measured. The industrial manufacturing has evolved over the years and become highly competitive on account of profit crunching, need for achieving economies of scale, and mounting pressure to deliver quality output in shorter lead times. This has driven the need for automation in manufacturing units, supporting demand for automated metrology equipment for inspection and reverse engineering applications. Thus, optical metrology being capable of boosting efficiency, productivity and quality levels through 100% inspection rates has become an integral element in industrial automation.

Based on the Automated Optical Metrology market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
