Abstracts

A door that is automatically operated using various sensors, such as infrared sensors, photoelectric sensors, and others is called as automatic door. The infrared works by detecting the change in temperature, for instance, when a human passes through the automatic door, the infrared sensors detect the warmer temperature and operates the door thereby. The system consists of the transmitter and receiver pair in the front and back of the door.

The automatic door has an application at various places such as residential and commercial spaces, hospitals, and others.

Based on the Automatic Doors market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
