Abstracts

A vending machine is an automated machine that sells food or beverages or other items. Similar to the development of traditional mobile phones in smart phones, vending machines have gradually developed into intelligent vending machines. Reduce adoption costs, such as large digital touch screen displays, Internet connectivity, cameras and various types of sensors, more cost-effective embedded computing capabilities, digital signage, advanced payment systems and a wide range of identification technologies contributed to this development. These intelligent vending machines enhance the interactive user experience, reduce operational costs, and increase the efficiency of vending operations through remote manageability and intelligent back-end analytics. It also provides better customer engagement for brands through interactive multimedia and social media connections.
