Abstracts

Automation is the use of several control systems for operating equipment such as boilers and heat treating ovens, machinery, switching in telephone networks, stabilization and steering of aircraft, ships and other applications with reduced or minimal human intervention. Automation saves labor and energy and improves quality and precision. Automation can be broadly divided into process and discrete automation. Instrumentation is the science and art of control and measurement of process variables within a manufacturing or production area. Several types of instrumentation techniques include network instrumentation, programmable instrumentation, operating systems instrumentation and processor instrumentation. Instrumentation goes together with automation as instruments are used in the automation process to measure, analyze or monitor the level of a product's performance.
