Abstracts

Automotive brake friction products consist of all the components that assist in either stopping or reducing the speed of the vehicle. Automotive brake friction products comprise various products, such as a brake pad, brake drum, brake shoe, disc and liner. Usually, a brake pad consists of an asbestos or a semi steel plated back facing the brake disc. They convert the kinetic energy of the vehicle into mechanical energy and assist the vehicle in stopping. Moreover, in disc brake systems, two brake pads are contained in a caliper that is mounted on the disc. In case of drum brakes, brake friction products, such as a brake shoe, push outward and stop the rotating motion of the brake drum.
