Abstracts

Catalytic converters are used to reduce exhaust emissions from ICEs. They convert exhaust emission, such as CO, HC, and NO_x into less harmful gases, such as CO₂ and N₂, and also H₂O. Two ways converters were installed in vehicles prior to 1990s but, since they do not reduce nitrogen emissions, three ways converters came into picture. Based on the Automotive Catalyst market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
