## Abstracts

The oil cooler is an integral part of the engine cooling system and is responsible for removing unnecessary heat from the engine, thereby enabling the engine to operate efficiently. This helps extend the life of vehicle engines and lubricants. The engine oil cooler is located between the oil filter and the engine block, or on the back of the radiator (main heat exchanger). It also maintains a stable oil supply at the optimum temperature of the entire engine block, thereby improving the overall life of the engine.
