## Abstracts

A properly “rebuilt” automotive part is the functional equivalent of a new part and is virtually indistinguishable from a new part. For all practical purposes, remanufacturing automotive parts is very much like assembling new parts except that many of the components are taken from used parts, especially the housing. In remanufacturing, the part must be completely disassembled, cleaned and examined for wear and breakage. Worn out, missing or non-functioning components are replaced with new or rebuilt components. Electrical parts frequently need rewinding or rewiring. After all work is done, the part is reassembled and tested for compliance with performance specifications.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Automotive Parts Remanufacturing market covering all its essential aspects.
