## Abstracts

A properly “rebuilt” automotive part is the functional equivalent of a new part and is virtually indistinguishable from a new part. For all practical purposes, remanufacturing automotive parts is very much like assembling new parts except that many of the components are taken from used parts, especially the housing. In remanufacturing, the part must be completely disassembled, cleaned and examined for wear and breakage. Worn out, missing or non-functioning components are replaced with new or rebuilt components. Electrical parts frequently need rewinding or rewiring. After all work is done, the part is reassembled and tested for compliance with performance specifications.

Based on the Automotive Parts Remanufacturing market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
