## **Abstracts**

A seal is used to control leakage of liquids or gases in the automotive, manufacturing, aerospace, electrical and electronics and petrochemical industries. Seals help in reducing problems associated with pollution due to leakage of contaminants, corrosion, and fatigue, which can destroy equipment leading to reduction of efficiency; increase in cost; and product loss. The gasket is a type of static seal, which is specifically used to provide a barrier between mating surfaces of mechanical assemblies. Gaskets are used to retain internal pressures and prevent liquids, gasses, and contaminants to escape from assemblies. Gaskets need to be resilient enough to conform to cavity irregularities and should remain rigid enough to provide a tight seal between the mating parts. The load of the gasket needs to be distributed evenly over the whole area of the gasket rather than few points with high loads.

Based on the Automotive Seals and Gaskets market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for
