Abstracts

Automotive temperature sensors are used to measure temperature at many places in an automobile, and usually consist of either a thermistor (thermally sensitive resistor), thermocouple, resistance temperature detector (RTD), or infrared device.

Thermocouples are usually used for higher temperature measurements (such as exhaust gas temperatures), and infrared sensors are used where direct contact with the object being sensed is undesirable.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Automotive Temperature Sensors market covering all its essential aspects.
