## **Abstracts**

Unmanned surface vehicle (USV) also known as autonomous surface vehicles (ASV) operate on the surface of the water without any crew. These are far cheaper than the equivalent weather vehicles and research vehicles. The main component that drives such unmanned systems is the unmanned auto pilot system (UAPS20). These vehicles can be used to explore such places, where the climatic condition is rough thereby gathering necessary information without putting the life of any individual at stake.

Based on the Autonomous or Unmanned Surface Vessel (USV) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
