Abstracts

Boron containing diamond (BDD) is a new type of diamond formed by doping boron into the diamond growth process. The electrode made of boron containing diamond is also called boron containing diamond electrode or boron containing diamond electrode, namely BDD electrode

Boron containing diamond (BDD) has a very wide electrochemical potential window and a small background current. In addition, the diamond is chemically inert (it does not react with any acid or alkali medium at room temperature), so it is not easy to scale. Therefore, it is the best choice for electrochemical electrode materials. BDD electrodes have been widely used in wastewater treatment, electrolysis and electrochemical synthesis, as well as detectors and sensors based on electrochemical principles

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the BDD Electrode market covering all its essential aspects.
