Abstracts

Centrifugal pumps are a sub-class of dynamic axisymmetric work-absorbing turbomachinery. Centrifugal water pumps are used to transport water by the conversion of rotational kinetic energy to the hydrodynamic energy of the water flow. The rotational energy typically comes from an engine or electric motor. The water enters the pump impeller along or near to the rotating axis and is accelerated by the impeller, flowing radially outward into a diffuser or volute chamber (casing), from where it exits. Below 30 Hp centrifugal water pumps are centrifugal water pumps whose horsepower is below 30.
