## Abstracts

Benzene is one of the natural components of crude oil. It is a highly flammable colorless liquid with a sweet odor. Benzene is primarily used as an intermediate to make chemicals such as styrene, ethylbenzene, cumene, cyclohexane, and nitrobenzene. More than 50% of the entire benzene produced is processed into styrene, which is used to make plastics and polymers. A small amount of benzene is used to make rubbers, detergents, explosives, lubricants, dyes, drugs, and pesticides.

Based on the Benzene market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
