## Abstracts

Succinic acid was identified as one of the top twelve building-block chemicals that could be produced from renewable feedstocks. Currently, succinic acid uses a petroleum-derived maleic anhydride route for its production, which is both costly and environmentally unfriendly. As a result, there is a growing interest towards discovering a more economical and environmentally cleaner way for its production. One methodology that has been receiving increased attention is the use of bacterial microorganisms. This technology takes advantage of the fermentative capabilities of *va*
