Abstracts

Bio-Lubricant is mainly synthesized from vegetable oil and oilseeds and mostly made of esters, which are either natural, oleo chemical, or complex. These lubricating substances are synthesized from numerous cultures, usually rapeseed or sunflower, but can also be produced from exotic oils. Moreover, depending on the usage, fatty acids can also be derived from palm oil and coconut oil and these oils have distinguished properties in comparison to the oils that are commonly use, predominantly in terms of oxidation stability.
