## Abstracts

Biobased Biodegradable Plastics are plastics that are degraded by the action of microorganisms such as bacteria, molds (fungi) and algae found in nature. The ideal biodegradable plastic is a polymer material that has excellent performance, can be completely decomposed by environmental microorganisms after being discarded, and is finally inorganicized to become an integral part of the carbon cycle in nature. 'Paper' is a typical biodegradable material, while 'synthetic plastic' is a typical polymer material. Therefore, the biodegradable plastic is a polymer material having both material properties of 'paper' and 'synthetic plastic'. The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Biobased Biodegradable Plastics market covering all its essential aspects.
