Abstracts

Biobased Biodegradable Plastics are plastics that are degraded by the action of microorganisms such as bacteria, molds (fungi) and algae found in nature. The ideal biodegradable plastic is a polymer material that has excellent performance, can be completely decomposed by environmental microorganisms after being discarded, and is finally inorganicized to become an integral part of the carbon cycle in nature. 'Paper' is a typical biodegradable material, while 'synthetic plastic' is a typical polymer material. Therefore, the biodegradable plastic is a polymer material having both material properties of 'paper' and 'synthetic plastic'
