## Abstracts

Biocatalysis is a chemical process where enzymes and other biological catalysts are used to speed up the reaction between organic components. Enzymes are derived from microorganisms, animal cells, and plants. The applications of biocatalysts are growing in industries such as textile and biofuel production, due to the advances in biocatalysts technology. Biocatalysis is a useful and eco-friendly substitute to metalocatalysis and organocatalysis in industrial and laboratory scale. Biocatalysts encourage the idea of green chemistry as they are mostly renewable, less toxic, and less hazardous having less or no effect on the environment.
