## Abstracts

Biomethane is also known as 'green gas', biomethane is produced from organic waste. Its properties are similar to those of natural gas, making it suitable for use as vehicle fuel and in heating applications. It also has its own specific benefits, the most important of which is its non-toxicity. Biomethane is a 100% renewable energy source produced by the natural breakdown of organic material: green waste, household waste, agricultural waste, food industry waste and even industrial waste. The process of breaking down this material in an oxygen-free environment produces biogas, which is then purified to become biomethane. This can then be used as a vehicle fuel, distributed in the mains gas supply or used to generate green power.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Biomethane market covering all its essential aspects.
