Abstracts

Biosimilar therapy is defined as a therapy that is highly similar to approved biopharmaceuticals. They are made by converting biopharmaceuticals made from living cells in the laboratory into large-scale production molecules. This is quite different from the general treatment method, which is identical to the reference small molecule drug. The reason behind this is that it is impossible to make a copy of the same biologic drug. Based on the Biosimilar Drug market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
