Abstracts

Boron is a chemical element, generally black or dark brown powder, common forms are crystalline boron and amorphous boron. Crystalline boron is gray-black, and its hardness is second only to diamond. Amorphous boron is brown in color and has more active chemical properties. Boron is found in nature mainly in the form of borax, boric acid and borates, which can be mined from rocks and lake sediments. Boron can be used to produce borax, boric acid and various boron compounds, mainly used in the manufacture of glass, ceramics, detergents, agricultural fertilizers and flame retardants.
