## Abstracts

Brightness Enhancement Film (BEF) is widely used in the design and manufacture of LCD screens and large-screen TVs. It is generally used to provide maximum brightness towards the on-axis viewer.

BEF uses a microreplicated prismatic structure to control the exit angle of the light. Light within the viewing cone (approximately 35° off the perpendicular) is transmitted out and light outside this angle is TIRed back into the film and recycled until it is within this cone angle.
