## Abstracts

BMC (Bulk Moulding Compound) can be moulded both in injection or compression process for large-scale production of medium-size or small complex parts.

BMC is, like SMC, a polymeric composite material, which consists primarily of a thermosetting resin, mineral fillers and glass fibre reinforcement. The resin used is generally unsaturated polyester (UP) or vinyl-ester (VE). Additional ingredients such as thermoplastic components, catalysts, inhibitors, mould release agents, thickeners and colour pigments are used to enhance the performance and moulding process of the final product.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Bulk Moulding Compound (BMC) market covering all its essential aspects.
