Abstracts

C4ISR stands for command, control, communication, computers, surveillance, and reconnaissance. The C4ISR system is a mix of software and robust hardware, wherein, the absence or lack of either will make the system handicap and incapable of proper and efficient functioning. These systems resolve the problem of fatalities in the war field by integrating weapons systems, with electronics hardware and organic control systems. The objective of these systems is to provide situational awareness, which enables decision making in real-time, near real-time, and in future at all the levels of command and authority. Each of these C4ISR systems is operated and maintained independently, and altered into a single device, as per the need and requirement. Moreover, the C4ISR system enables the military forces to conduct and operate weapons for surgical missions, remotely, over satellite networks.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the C4ISR market covering all its essential aspects.
