Abstracts

The C9 Aromatic Solvents Category is comprised of a petroleum naphtha refinery stream, "Solvent naphtha, (petroleum), light aromatic," (CAS RN 64742-95-6; hereafter referred to as C9 aromatic naphtha), from which the other, more chemically pure members of this category are isolated. These other members include several C9 aromatic isomers (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and mixed ethyltoluenes) that have relatively limited production and are used primarily as chemical intermediates. For category members that have data, physicochemical properties are very similar. In addition, existing data indicate that the mammalian and acute aquatic toxicity of the isolated C9 aromatic isomer substances are similar to the C9 aromatic mixture.

Based on the C9 Aromatic Solvent market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
