Abstracts

Cadmium electroplating is widely used to protect steel and cast iron from corrosion. The cadmium plating is used to protect the inner metal. Since cadmium is the anode relative to iron, the underlying iron metal can be protected by the consumption of the cadmium plate even when the cadmium is pulled or cracked. Cadmium is usually applied as a thin layer (less than 25 μ m or 1 mil thick) for atmospheric corrosion resistance.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Cadmium Electroplating market covering all its essential aspects.
