## Abstracts

Cadmium electroplating is widely used to protect steel and cast iron from corrosion. The cadmium plating is used to protect the inner metal. Since cadmium is the anode relative to iron, the underlying iron metal can be protected by the consumption of the cadmium plate even when the cadmium is pulled or cracked. Cadmium is usually applied as a thin layer (less than 25  $\mu$ m or 1 mil thick) for atmospheric corrosion resistance.

Based on the Cadmium Electroplating market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
