Abstracts

Anthracite, also known as hard coal, is a naturally occurring material. It is rich in carbon content and represents the highest level of non-metamorphic coalification. Anthracite coal forms as a result of compression of geologically preserved organic residue of primordial swamps, under the Earth's crust. Anthracite coal finds numerous applications in foundries as a carbon raiser, refractory coating component, filler in rubber production, and pigments. Calcination process involves heating anthracite coal to high temperatures, in the presence of air or oxygen.
