Abstracts

Canine Stem Cell Therapy refers to the treatment of canine joint-related diseases using stem cells. Adipose-derived stem cells (ASCs) are the most common and most desirable adult stem cells because of their safety, their ability to be harvested and used, and the ability to differentiate into multiple cell lineages. Most early clinical studies have focused on adipose-derived stem cells for the treatment of a variety of chronic diseases such as arthritis, tendinitis, lameness and atopic dermatitis in dogs. A lot of attention in veterinary medicine is the treatment of osteoarthritis in dogs.
