As the medical and recreational cannabis markets continue their steady climb toward legitimacy, the demand for lab-tested products climbs alongside it. Cannabis testing is the scientific process of measuring different chemicals and compounds in the product. They can measure beneficial constituents like cannabinoids and terpenes, or not-so-desirable contaminants such as pesticides, mold, and residual solvents. Research is now showing that strains exhibit different compound profiles, unique “fingerprints” built by a specific composition of cannabinoids and terpenes.
