Abstracts

Caprylhydroxamic acid, also referred as caprylohydroxamic acid or octanohydroxamic acid is an ample spectrum anti-fungal agent and a bactericide. Caprylhydroxamic acid is also abbreviated as CHA and unlike other common preservatives, it is considered to be effective anti-fungal agent especially at neutral pH levels. CHA is also a chelating agent for iron ions, although low iron environments show relatively lower levels of mold growth. CHA is used as an alternative of parabens.

Based on the Caprylhydroxamic Acid market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
