## Abstracts

Carbide is widely used as tool materials, such as turning tools, milling cutters, planers, drill bits, boring tools, etc., for cutting cast iron, non-ferrous metals, plastics, chemical fiber, graphite, glass, stone and ordinary steel.

Diamond tools have extremely high hardness and wear resistance, low friction coefficient, high modulus of elasticity, high thermal conductivity, low coefficient of thermal expansion, and low affinity with non-ferrous metals. Can be used for precision machining of non-metallic hard and brittle materials such as graphite, high wear resistant materials, composite materials, high silicon aluminum alloy and other ductile non-ferrous materials.

Based on the Carbide Cutting Tools and Diamond Cutting Tools market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
