Abstracts

Carbon monoxide is a colorless, tasteless, and odorless gas. It is soluble in water, ethanol, benzene, acetic acid, chloroform, ammonia solution, and ethyl acetate. Primarily, it is produced by the steam reforming natural gas method. whereas, it can also be produced through dehydration of formic acid with sulfuric acid, incomplete combustion of carbonaceous materials, their action of carbon and oxygen at elevated temperatures, and reduction of carbon dioxide over hot coke. Moreover, carbon monoxide is used in a combination with several other gases such as nitrogen, hydrogen, methane, and carbon-di-oxide in order to provide fuel gas called syngas, which is further adopted as a substitute for natural gas. The product finds its major use in the metal, chemical, and electronics industries.
