Abstracts

Carbon monoxide is a colorless, odorless, flammable, toxic gas. High purity carbon monoxide, which is dry and free of sulfur compounds, is generally non-corrosive to metals at atmospheric pressure. Low purity grades containing moisture, sulfur compounds and other impurities can form toxic metal carbonyl compounds and can cause stress corrosion cracking of carbon steel under high pressure. Chemically, carbon monoxide is stable, but it can act as a strong reducing agent at high temperatures.

Based on the Carbon Monoxide market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
