## **Abstracts**

Carbon steel which is also known as plain carbon steel is an alloy which is manufactured using the combination of iron and carbon. Carbon steel is also the term used to refer steel which is not stainless steel. Carbon steel also contains other metals in extremely small quantities. Pipes are used mainly for transportation of fluids and gases like water, oil, gas, propane etc. Therefore, the outside and inside diameter is the key measurement and pressure rating is important. The main use for tubes is for structural purposes such as scaffolding. They are often put to use in applications that call for precise outside diameters. Therefore, the outside diameter is vital as it indicates how much the tube can hold.
