Abstracts

For the easy burial in the wild, cats naturally excrete in soft or sandy soil. To stimulate this natural desire, a litter box's lowest part is occupied characteristically with an inch (2.5 cm) or additional of cat litter. Litter box filler is a portable, granular material that absorbs moisture and odors such as ammonia. Some litter box brands contain baking soda to absorb odors. The most common material is clay, although recycled paper is also used. Pellets and silica-based crystal are also used.
