Abstracts

Cationic starch is a modified starch. Cationic starch is mainly used as a wet end starch. Although natural starch can be used as the wet end starch, cationic starch is more preferred. Because cationic starch is positively charged, they are easily attracted by negatively charged cellulose fibers and fillers. As a result, fiber-fiber and fiber-filler adhesion increase. Therefore, the retention of fine particles and fillers is improved and the paper strength is also increased.

Cationic starch can improve paper strength, drainage, water retention, improve paper quality; reduce dust removal, lint and increase size; better control of papermaking process, thereby reducing paper web breakage, improving paper machine performance and productivity. Cationic starch also allows for the use of more fillers and more recycled fibers, thus reducing costs. As a surface sizing agent, cationic starch improves stiffness, opacity, print quality and brightness.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Cationic Starch market covering all its essential aspects.
