## Abstracts

Central venous catheter is a thin, flexible catheter that is placed into the large vein above the heart, usually through a vein in the neck, chest, or arm. It's also called the central venous line or central line. Central venous catheters are used to administer chemotherapy drugs, intravenous (IV) fluids, antibiotics, blood and platelet transfusions, parenteral nutrition, etc. The peripherally inserted catheter is the commonly used central venous catheter due to several advantages such as easy to insert and remove, easy to repair. Central venous catheters need special care.
