## **Abstracts**

The chain coupling uses a common chain and meshes with two parallel sprocket wheels of the same number of teeth. The main difference of the chain couplings of different structure types is that different chains are used. Commonly, there are double row roller chain couplings, single Roller chain coupling, toothed chain coupling, nylon chain coupling, etc. Chain coupling has simple structure (four parts), convenient assembly and disassembly, two shafts that are connected without moving when disassembled, compact size, light weight, certain compensation ability, low requirements for installation accuracy, reliable operation and long life. Longer, lower cost and other advantages. It can be used for shafting transmission of machinery such as textile, agricultural machinery, lifting and transportation, engineering, mining, light industry and chemical industry.

The Chain Couplings market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
