Abstracts

Checkpoint inhibitor is a type of drug used in immunotherapy, which helps block the proteins present on tumor cells, as these affect the functioning of the immune system. Immune checkpoint inhibitor drugs block different checkpoint proteins, including cytotoxic T lymphocyte associated protein 4 (CTLA-4), programmed cell death protein (PD-1), and programmed death ligand 1 (PD-L1). Immune checkpoint inhibitors have witnessed increasing demand, owing to increase in incidence of different forms of cancer, surge in awareness of checkpoint inhibitors for the treatment of cancer, higher number of pipeline drugs, and upsurge in adoption of immune checkpoint inhibitor drugs.
