## Abstracts

Chemical management services (CMS) involve a strategic, long-term relationship in which a customer contracts with a service provider to supply and manage the customer's chemicals and related services. Under a chemical services contract, the provider's compensation is tied primarily to quantity and quality of services delivered, not chemical volume. Chemical services go beyond invoicing and delivering product to optimizing processes, continuously reducing chemical lifecycle costs and risk, and reducing environmental impact. These chemical services are often performed more effectively and at a lower cost than companies can do by themselves.

Based on the Chemical Management Services (CMS) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
