Abstracts

Chemical vapor deposition is a chemical progression utilized for the production of high performance high purity solid materials. It includes a deposition process of a high performance thin solid coating, fibers, powders and monolithic components over metal or plastic surfaces of numerous products. There are many precursors/materials that are deposited in solid form on the surface and the choice of precursor depends upon the type of application for which the deposition film is made. This technology further has been categorized into plasma enhanced (PECVD), combustion (CCVD), and hot-wire chemical vapor deposition (HWCVD).
