Abstracts

Chewing gum base is the main ingredient of the chewing gum with other ingredients such as food colors, sweetener, and flavors, which gives gum the said chewable characteristic due to masticatory properties. Chewing gum base is non-digestive, non-nutritive, and water-insoluble. Chewing gum base is the substance that holds all other ingredients together. Chewing gum base possesses characteristics such as pliability, plasticity, elasticity, hardness, the degree of stickiness, and the desired texture. These are important factors to consider when considering a material to be used as a chewing gum base. It is important for a chewing gum to have a high degree of pliability and elasticity and not to become firm during the mastication process.
