Abstracts

Chlorobenzene is an aromatic organic compound with the chemical formula C_6H_5Cl . It is colorless, flammable liquid and acts as a common solvent for use as an intermediate in the manufacture of other chemicals. These compounds are primarily used as an intermediary in the manufacture and synthesis of pesticides and various other chemicals. Chlorobenzene came into existence in 1851 and at present is produced by benzene chlorination in the existence of catalyst, acids such as sulfur dichloride, ferric chloride and anhydrous aluminium chloride. This chlorination process of benzene can ideally produce 12 different chlorobenzenes, however, world events and technology has decreased the chlorobenzene to production of three primary products such as monochlorobenzene, p-dichlorobenzene and o-dichlorobenzene. Other chlorobenzenes that are not produced on a large scale include m-dichlorobenzene, tetrachlorobenzenes, trichlorobenzenes and hexachlorobenzene.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Chlorobenzene market covering all its essential aspects.
