## Abstracts

Chlorothalonil is a broad spectrum, non-systemic, organochlorine pesticide that was first registered in 1966 for turfgrasses, and later for several food crops. Chlorothalonil has both a low Henry's law constant and vapor pressure, and hence, volatilization losses are limited. Although, chlorothalonil's water solubility is low, studies have shown it to be highly toxic to aquatic species. Mammalian toxicity (to rats and mice) is moderate, and produces adverse effects such as, tumors, eye irritation and weakness. Although, there is no indication that chlorothalonil is a human carcinogen, there is sufficient evidence from animal studies to classify it as a probable carcinogen.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Chlorothalonil market covering all its essential aspects.
